

RHCN Summer Meeting  
12 August 2015

# **Recap & Setting the Scene**

Robert L Wears

# yesterday

“synthesis”

“dark matter”

“gaps”

“imagination”

# modern physics

grand unified theories – GUTs

gaps in the universe and dark matter

“weakly interacting massive particles”

WIMPS

# modern physics

a new element!

# a new element!

*administratium*

heaviest element in the universe

has 0 protons and 0 electron, so atomic number of 0

1 neutron, 15 assistant neutrons, 70 vice neutrons, 161 assistant vice  
neutrons => atomic weight of 247

held together by a new strong force mediated by mass-less, meson-like  
particles called “morons”

# a new element!

*administratium*

because it has no electrons, it is chemically inert  
but, it can be detected chemically because it is an *anti-catalyst*  
it slows every reaction it comes into contact with;  
a reaction ordinarily taking 1 second  
takes 4 days in the presence of *administratium*

# a new element!

*administratium*

has a half-life ~3 years

does not decay, but re-organizes

assistant neutrons, vice neutrons & assistant vice neutrons change places

typically involves increase in total numbers,

the only element whose atomic weight increases over time

# a new element!

*administratium*

occurs naturally in the atmosphere

high concentrations near government offices, universities

highly toxic

characteristic toxidrome

obsession with clipboards, checklists, & metrics

even small exposures should be treated with large volumes of alcoholic liquids by mouth, and extended bed rest
